

Interview with Mr. Wolfgang Sorgatz

The Transformer Life Management Conference 2014, which is set to take place in Neuss (Germany), Shanghai and Dubai, will focus on an important question for all transformer manufacturers and operators: "How can safety and operational issues of the transformers in the network be mitigated?"

To find out more, Power Transformer News spoke to Wolfgang Sorgatz, Managing Director of TLM's organizers, ENERGY Support.

What is the TLM Conference?

The TLM Conference offered by Energy Support, a global transformer diagnostic solutions provider, is a seminar that offers in-depth, technical know-how in the area of transformer life-cycle management. Energy Support's partners in the conference range from transfer development, testing and maintenance providers to suppliers involved in building, producing and operating transformers, such as paper, insulating oil, measurement instruments, oil processing facilities etc.

What are the aims of the TLM Conference?

This thought-leadership forum focuses on providing transformers operators the opportunity to view, experience, exchange knowledge and learn about the cutting edge technologies available today in energy transmission. The exchange of information and discussions during the conference provides participants a platform to identifying problems and to work together towards finding the best solutions to tackle the problem of safety, security, efficiency and longevity of transformers.

How is the Conference carried out?

The Conference is organized by ENERGY Support with support of global sponsors and partners in three host countries, Germany, the UAE and China. The objective of the conference is to create a platform that connects global providers and suppliers of energy transmission, and arm them with the latest technical knowledge and industry best practices that all stakeholders, including customers can benefit from.

The exhibition partners provide implementation support by also facilitating targeted marketing activities and reaching out to existing and new customers.

Who are the customers of the event?

The customers of the TLM Conference come from the areas of industry, utilities, and manufacturers and operators of transformers.

Why should companies be interested in participating as an exhibitor?

The TLM Conference benefits from the cross-marketing activities of participating companies. As a result, a larger number of customers can be targeted from promotional activities. This type of initiative drives new partner and customers contacts and networking opportunities.
